

He studied Artificial Intelligence at MIT, and after graduating helped found **Thinking Machines**, a supercomputer company with the corporate motto of “**building a machine that will be proud of us**”. Thinking Machines produced the Connection Machine, the first supercomputer to be modeled on the human brain and to use parallel processing, which employs many small processors operating simultaneously to execute calculations.

Kahle founded **Wide Area Information Server**, an internet publishing system that was bought by AOL. He co-founded **Alexa Internet**, the analytics company that is now owned by Amazon.
